

Motorcycle SEAT HEATERS

From the **CHECK CORPORATION**

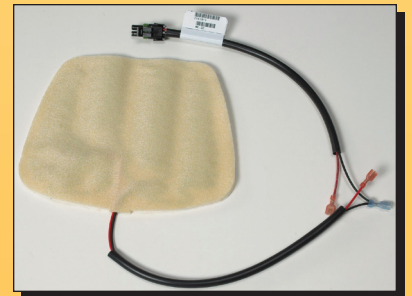

The comfort and pleasure of a heated seat is now available for motorcycles of all types and sizes. A Seat Heater from the Check Corporation quickly provides comforting warmth to the rider through the seat's cushion. Check Corporation seat heaters are thoroughly tested and manufactured to meet strict government and vehicle manufacturer standards for safety, durability and performance.

The thin peel and stick seat heater elements fit under the seat cover without detection and all wiring and hardware is installed out of sight.

The waterproof, illuminated on-off switch can be installed for easy access or hidden from view. The seat heater also has a built-in thermostat, which automatically regulates the temperature of the heater to safe and comfortable temperatures.

The Check seat heater kit comes in two sizes to fit most motorcycle seat configurations. Each seat heater is individually fused for safety and wired into the bike's electrical system.
