

Massaging SEAT HEATERS

From the Check Corporation

Our 12 years of proven seat heater technology is now available with a built-in massage system. Check Corp's research and development group has developed the perfect massage seat heater combination system for automotive aftermarket installations.

Reliable, durable and easily installed in cloth or leather seats. The motors and premium peel-and-stick seat heater elements fit under the seat cover without detection. All wiring and hardware is installed out-of-sight.

These systems are vehicle and seat specific so they will install quickly and compliment the original seat design.
