

CAUTION: This product generates heat to neutralize bacteria and inactivate viruses. The operating temperature is 149°F (65°C) which is too hot for items containing batteries. Skin damage may occur if exposed for more than a few seconds.

Directions for Use

- 1) Place contaminated item(s) in the bag and close the lid
- 2) Plug in power, run the bag for 60 minutes
- 3) Disconnect power, open lid to allow heat to escape, wait a couple minutes before removing item(s)

Safe for fabrics and most plastics, although repeated use may degrade PVC
